StudySpace - AI REVIEW DEMO
Synthetic report. Advisory demonstration, not an official submission.

Architecture and implementation

The browser sends authenticated REST requests to a backend API.
The API validates project membership and stores metadata in SQL Server.
Files are stored separately; every file version has a checksum.
A deployment diagram and production configuration are not included.

Code quality

The application separates controllers, business services and repositories.
Input validation rejects malformed fields and the API returns structured errors.
No code excerpts or code review evidence are attached.

Testing and security

Testing evidence has not yet been supplied in this first draft.
There are no test cases, test results or authorization screenshots here.
